

**Employee Attestation: Return to Work Requirements
Due to COVID-19-Related Absence**

Purpose: This form must be completed and submitted to the agency's HR department prior to an employee returning to work who was in close contact (see footnote 2) with a person who tested positive for COVID-19; who tested positive for COVID-19; or who had symptoms of COVID-19 but did not get tested. If an employee was tested for COVID-19 due to symptoms but did not have close contact with a person who tested positive and tested negative, the employee can return to work¹ once their doctor releases them and/or their symptoms have improved without meeting the requirements outlined in this form.

Agency Notice: If an employee does not meet the below criteria to return to work but works in a healthcare or critical infrastructure position with staffing shortages, please contact DHR.

Employee Section:

I, _____ (employee name), attest that I fit one of the following criteria, as required to return to work:

1. I had symptoms of COVID-19¹; might have been a close contact² of someone who was infectious with COVID-19; or tested positive for COVID-19³, _____ (initials)
 - I had mild or moderate illness⁴ and I am not severely immunocompromised⁵ _____ (initials), **and**
 - At least ten (10) days have passed since symptom onset _____ (initials) **and**
 - At least twenty-four (24) hours have passed since resolution of fever without the use of fever-reducing medications _____ (initials) **and**,
 - Other symptoms have improved _____ (initials).

OR

2. I tested positive for COVID-19, but I have not had any symptoms _____ (initials), **and**
 - At least ten (10) days have passed since the date of collection of the specimen for the first positive test for COVID-19 _____ (initials).

OR

3. I was in close contact of an individual who was infectious with COVID-19 _____ (initials), **and**
 - At least fourteen (14) days have passed since I was within close contact of an individual who tested positive for COVID-19 _____ (initials), **and**
 - I have had no signs or symptoms of COVID-19 since the close contact _____ (initials).

(See Page 2)

¹ For agencies with employee screening protocols, employees must also be able to pass the requirements of their agency's screening process.

To the best of my knowledge and belief, under penalty of perjury, I attest that the above statement is true and accurate.

Definitions

¹Symptoms of COVID-19 include: Fever or chills, cough, shortness of breath or difficulty breathing, fatigue, muscle or body aches, headache, new loss of taste or smell, sore throat, congestion or runny nose, nausea or vomiting, or diarrhea. This list does not include all possible symptoms. CDC will update this list at <https://www.cdc.gov/coronavirus/2019-ncov/symptoms-testing/symptoms.html> as more is learned about COVID-19.

²Close contact is defined as being less than six feet from someone who has tested positive for COVID-19 for 15 minutes or more over a 24-hour period starting from 2 days before illness onset (or, for asymptomatic individuals, 2 days prior to test specimen collection) until isolation.

³For this guidance, tested positive for COVID-19 means that SARS-CoV-2 RNA was detected by polymerase chain reaction (PCR) on a respiratory (nasopharyngeal, nasal, BAL) or saliva specimen. CDC has not developed guidance for return to work when SARS-CoV-2 antigen tests are positive. Tested positive for SARS-CoV-2 does not mean a positive antibody test.

⁴Mild illness is various signs and symptoms of COVID-19 without shortness of breath, dyspnea (difficulty breathing), or abnormal chest imaging. Moderate illness is evidence of lower respiratory disease (e.g., pneumonia) by clinical assessment or imaging and an oxygen saturation of $\geq 94\%$ at room air at sea level. If someone was on oxygen therapy or in the ICU, their illness would be considered severe or critical.

⁵For the purposes of this document, “severely immunocompromised” is defined as being on chemotherapy for cancer, being within one year out from receiving a hematopoietic stem cell or solid organ transplant, untreated HIV infection with CD4 T lymphocyte count < 200 , combined primary immunodeficiency disorder, or receipt of prednisone $> 20\text{mg/day}$ for more than 14 days.
